

### Negative Impfeffektivität Monate nach letzter Impfkampagne

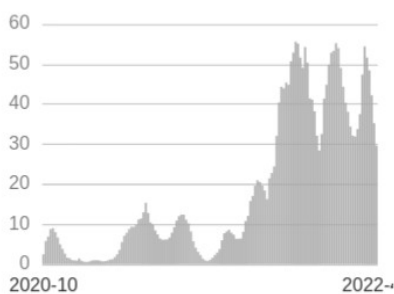

mRNA-behandelte Personen erleiden Monate nach der letzter Impfung eine ‚negative Impfeffektivität‘; sie infizieren sich signifikant häufiger. Eigentlich gesunde, aber mRNA-behandelte Personen sind sehr häufig infiziert und stecken vulnerablere Personen an. Daraus ergibt sich insb. in der kalten Jahreszeit eine erhöhte Gefahr. Zb gab es nie mehr Krankenhauseinweisungen mit Covid als Oktober 2022.

### Positivenanteil

RKI-Testzahlerfassung **29,66%** | -0,06% ↘

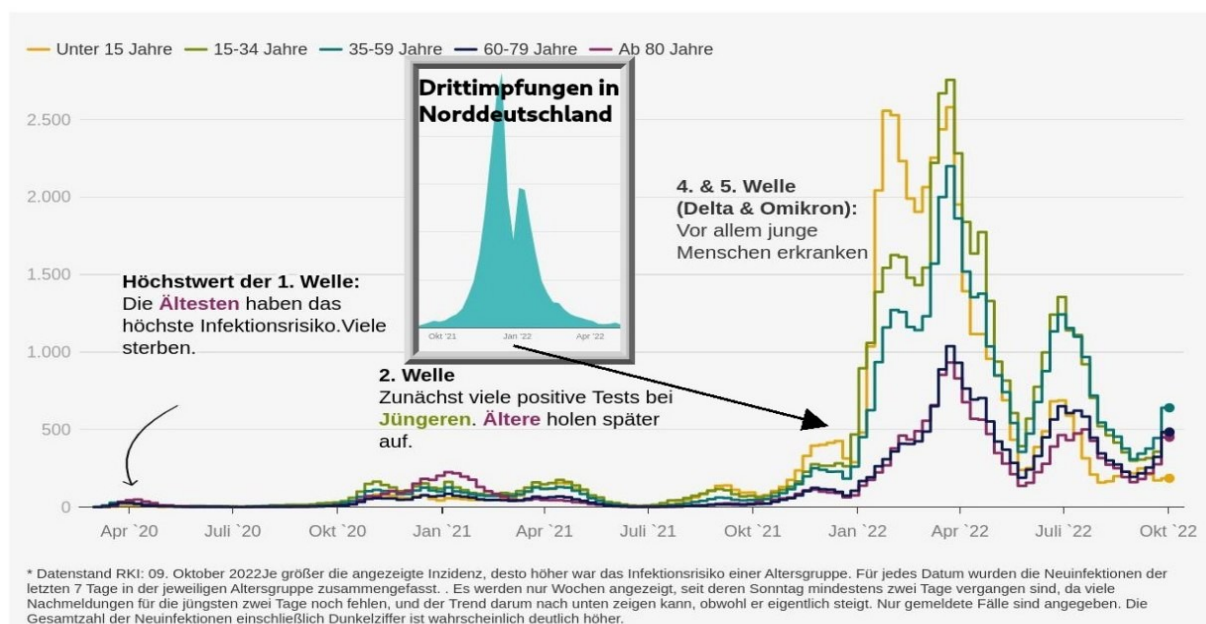

### Hospitalisierungen

Meldesystem gemäß IfS **5,94** | -0,65 →

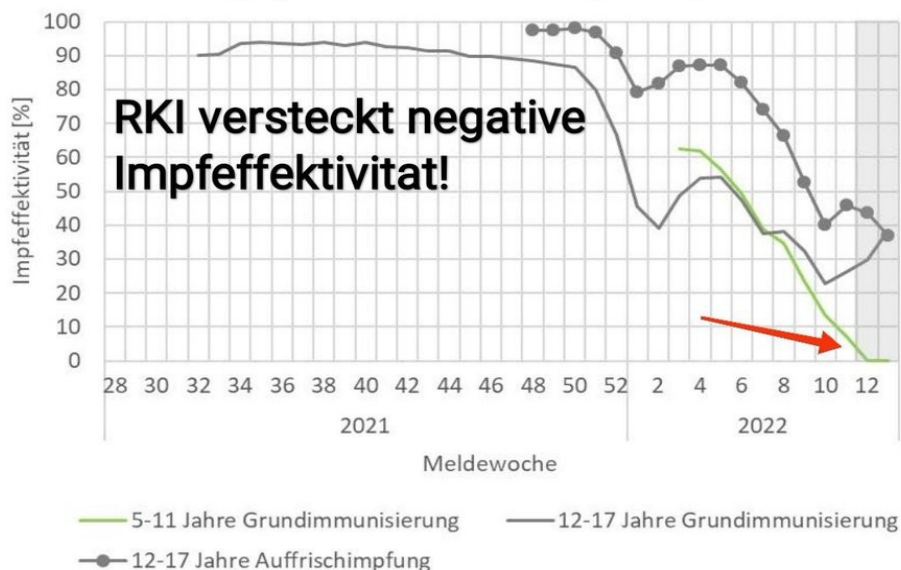

## Corona-Infektionsrisiko nach Altersgruppen

Die folgende Grafik zeigt, welche Altersgruppen in Norddeutschland am stärksten von Corona-Infektionen betroffen sind. Dies hat sich seit Beginn der Pandemie mehrfach geändert.

<https://www.ndr.de/nachrichten/niedersachsen/Corona-in-Niedersachsen-Inzidenz-liegt-bei-8712.corona1458.html>

### Symptomatische Infektion (Kinder)
