

Questioning 'Science'

Comments by 'Nike' on <https://viroliegy.com/>

It has often been said that, to make discoveries, one must be ignorant. This opinion, mistaken in itself, nevertheless conceals a truth. It means that it is better to know nothing than to keep in mind fixed ideas based on theories whose confirmation we constantly seek, neglecting meanwhile everything that fails to agree with them.”

– Claude Bernard

“In reality, regarding the microscopic level of existence, no human knows what happens in a living organism. To believe that optical or electron microscopy reveals what exists and what happens in the living organism is madness in its purest form. Molecular biology, genetics, virology, immunology, etc ... all these are just pseudo-scientific tales about things never proven to exist.”

The so-called science of biology at the microscopic level is nothing more than a more or less objective description of what happens to tissues in the natural process of decomposition, followed by the completely unproven assumption that what happens in the living organism is identical to phenomena observed under a microscope. So-called biologists degrade tissue samples by mechanical, thermal, chemical and radiation methods to be able to observe them under a microscope, after which they emit an endless number of hypotheses, assumptions and guesses about the observed structures and their functioning. Then they claim that the same things happen in living organisms.“

We are talking about examining dead tissues and samples and trying to interpret any meaning about what occurs inside a living organism from the study of heavily altered dead samples. Alterations to the samples happen rather quickly hence the need for fixation:

“The first – and perhaps most important – step in the preparation process is fixation. In this step, living tissue is chemically treated to stabilise it. This kills the tissue sample at the same time. IT’S IMPORTANT TO FIX A SAMPLE AS QUICKLY AS POSSIBLE BECAUSE, AS SOON AS TISSUE IS REMOVED FROM ITS NATURAL ENVIRONMENT, IT STARTS TO CHANGE. For instance, oxygen levels start to drop as soon as tissue is removed from an organism. This causes mitochondria to start to change their appearance. Another common change in the fixation process is that lipids tend to form micelles.”

<https://www.sciencelearn.org.nz/resources/500-preparing-samples-for-the-electron-microscope>

The sample viewed in EM is so far removed from its original state as to be entirely meaningless. Harold Hillman described the process perfectly. I highly recommend you familiarize yourself with his work:

“For example, most cytologists know, but readers of elementary textbooks do not, that when one looks at an illustration of an electron micrograph: an animal has been killed; it cools down; its tissue is excised; the tissue is fixed (killed); it is stained with a heavy metal salt; it is dehydrated with increasing concentrations of alcohol; it shrinks; the alcohol is extracted with a fat solvent, propylene oxide; the latter is replaced by an epoxy resin; it hardens in a few days; sections one tenth of a millimetre thick, or less, are cut; they are placed in the electron microscope, nearly all the air of which is pumped out; a beam of electrons at 10,000 volts to 3,000,000 volts is directed at it; some electrons strike a phosphorescent screen; the electron microscopists select the field and the magnification which show the features they wish to demonstrate; the image may be enhanced; photographs are taken; some are selected as evidence. One can immediately see how far the tissue has travelled from life to an illustration in a book.”

<https://www.big-lies.org/harold-hillman-biology/what-price-intellectual-honesty.htm>

“ Tissue and organ harvesting is done from living people who are said to be brain

dead to justify surgical homicide. The process of decomposing the tissues and organs that are harvested for transplantation begins from the moment they are surgically detached from the body and takes place gradually depending on the degree of vitality of the living person who was killed by doctors to harvest tissues and organs. The faster the harvested tissue or organ is transplanted, the less degraded they are and the more efficiently the recipient's body can regenerate them. This is why there is an approximate time limit for a certain transplant to be performed. The success of a transplant depends, in essence, on the general vitality of the man killed in order to harvest his tissues and organs, on the specific vitality of the tissues and organs harvested, but also on the vitality of the man who receives them and must regenerate what has been degraded. from the time of harvest until the time of attachment to the new organism. In reality, tissue and organ transplantation is not a proof that Modern Medicine is the most advanced form of medicine but, on the contrary, it is another proof that Modern Medicine is a total failure due to the fact that it is a total anti-medicine, from all points of view.”

The techniques used for the biochemical and molecular characterization of so-called sub-microscopic particles and the evidence presented for the functions of sub-microscopic particles are just other colossal scams of so-called molecular biology.

We will not be able to understand anything correct in biology, medicine and all other fields of existence if we judge things in terms of the lie of the existence of atoms and molecules. Chemistry, Bio-Chemistry and Molecular Biology are false sciences, because there are no atoms or molecules. Yes, there is no matter. Everything is “energy” that is structured in countless ways, thus giving rise to what we call being matter.

No one has ever provided direct and uninterpretable evidence for the existence of atoms and molecules. Atoms and molecules are just theoretical concepts, never proven. The same is true of all the structures purported to exist, although they cannot be seen under a microscope. These are just unproven hypotheses.

Because there is no “matter” but everything is “energy” (so-called “matter” is just another form of structuring “energy”) ... true medicine must be understood only in terms of the manifestations of “energy”. And, of course: no one knows what

“energy” is. The structures considered to be “materials” that are observed under the optical microscope, are nothing but forms of manifestation (vibrations) of the fundamental “energy” of which everything is constituted, that is, what is invisible and what is visible but also palpable. True medicine goes beyond the deception of the existence of atoms and molecules of “matter” and explains life in this Underworld by understanding that everything is “vibrating energy.

We are told that although gel electrophoresis is an indirect and interpretable method, it provides sufficient evidence for the existence of nucleotides that are thought to be the structures that make up the so-called DNA and RNA nucleic acids.

On the other hand, no one tells us about the direct or indirect methods by which the so-called molecular structures from which the so-called nucleotides are claimed to have formed have been highlighted. I am referring to the so-called nitrogenous bases, the so-called five-atom sugars and the so-called phosphate groups.

Nucleic acids do not exist. No one actually isolated, purified, or visualized any component of so-called nucleic acids or any DNA fragments. All so-called evidence for the existence of nucleic acids is indirect, circumstantial and subject to interpretation. In fact, no one has actually isolated, purified and visualized any of the hypothetical submicroscopic particles that are the subject of the study of pseudoscience called molecular biology, genetics, virology and immunology. In fact, all the so-called molecular atomistic sciences are just scams, because atoms exist only at the level of theory: Atomist Theory.

In reality, no one has ever isolated, purified and visualized any submicroscopic particles. All submicroscopic particles are pure inventions. As for the so-called electron microscopy, this is just a laboratory procedure which, like the PCR test, is only useful for claiming all sorts of inventions based on it. The truth is that all so-called atomic-molecular science is deceptive in its purest form and electron microscopy is not true microscopy but just a scam, a deceptive criminal prank.

“People don’t realize that molecules themselves are somewhat hypothetical, and that their interactions are more so, and that biological reactions are even more so.”

– Kary Mullis”

All those structures that biologists call cells are highlighted only in decaying tissues due to the fact that by extracting them from living organisms they are disconnected from the energy of life and are deprived of specific nutrients that can only be provided by the body. In addition, dead tissues, which are in the natural process of decomposition, are also severely damaged due to preparatory procedures and microscopy techniques. Even today, the so-called Scientific World does not have the technical capabilities to conduct control experiments on the hypothetical cell structure of the tissues of living organisms, because so-called scientists cannot see live and live what exists and what is it happens in the tissues of a living organism.

No so-called scientist has so far been able to see a so-called cell in vivo, that is, in the tissues of a living being. Moreover, so far no so-called scientist has been able to see how a so-called cell works in vivo, that is, to see it live, in real time, when it is in the tissues of the living organism.

Quite simply, as the doctor and biologist Alain Scohy openly acknowledges, all our supposed knowledge of how the living organism is structured and how it works is done by extrapolating the findings obtained by researching tissue samples extracted from the living organism and which are in the process of decomposition, which in order to be observed under a microscope are also subjected to preparatory laboratory processes that are extremely harmful.

In other words, the so-called Cell Biology is the emanation of the consensus of so-called scientists who have decided that observations made on dead, decaying tissue and extremely damaged by laboratory and microscopy procedures can be considered to be exactly what exists in the living organism.

„Our supposed knowledge, today, of what life is on a microscopic scale, is based only on observations made on dead tissue, which are subject to an astonishingly harmful preparation protocol.”

– Dr. Alain Scohy

Quote:

Distinction between science and empiricism

This distinction is very important, but often elided over by lecturers and theoreticians, probably because they don't like admitting that some of their beliefs may be unsoundly based.

Some examples- Anaesthetics.

I was, personally, astonished when I was told that nobody knows how anaesthetics work.

When chemistry improved to the point that pure chemicals which barely exist in nature could be isolated, some of their properties were unpredicted.

Ether and chloroform, and nitrous oxide, were found to have anaesthetic effects, which—importantly—were reversible.

Today, the mechanical side is far improved: the purity, the quantity delivered, the time measurement, the gas cylinders, the ambulances, are all far more efficient.

But the way they operate on the body isn't known.

There are theories, and descriptions of their actions; for example, hypotheses including the cell 'membrane fluid mosaic'. (These, probably mythical constructions, are what Margaret Thatcher worked on as a chemist). It's not surprising that occasional anomalies occur.

Drug testing.

If it does what they want, they say it works according to the theory. ('Beta blockers'.) However, huge numbers of similar molecules are tested; the acid test is always empirical. Any unwanted effect is labelled a 'side effect' as though it might go away.

The same sort of thing applies with **insecticides**, which have to be tried out on (for example) caterpillars or species of fly.

Blood transfusions. The blood types were all found empirically: the important thing was to avoid clotting, rather than work out what made them clot.

Antibiotics are another example: penicillin was found by accident when a mould, penicillium, was noticed to kill bacterial growths in a petri dish.

Lithium, as an anti-manic depressive drug, was found by chance to make lab

animals sleepy.

Titanium was found by chance to work well in bone replacements: the new musculature adhered well to it.

Stainless steel is another example: I doubt anybody really knows how it works. The trick is to alloy metals and test the result. An interesting point here is that many people will claim to know (e.g.) why stainless steel doesn't rust: that there's an oxide layer, for example.

But if they can't predict which alloys will work, this arguably is just a form of words restating what they've found by trial.

The diagnosis is a hoax. There are no diseases.

There are only automatic processes for adjusting the intensity of energy flows, adjusting the structure of tissues, and adjusting the efficiency of functions (including sensory functions and tissue regeneration functions) in order to cope with all harmful existential factors:

- negative feelings (fears, sorrows, envy, hatred)
- toxicity from chemicals (including medicinal chemicals), toxicity from some of the concentrated metals and minerals, toxicity from artificial radiation
- physical and intellectual overload
- quantitative and qualitative malnutrition
- weather exposure
- iatrogenic

All the adaptive changes that our being constantly operates in order to be able to cope with the harmfulness of the factors listed above, have as their only objective: survival. That is why the fight against the constant changes that take place in the body and the fight against the unpleasant symptoms we face as our body adapts to cope with the harmfulness of the factors listed above, means even fighting the automatic processes that our being rebalances its energies and regenerates its tissues.

There are no viruses, pathogenicity of microorganisms and genes.

Which is why there is no infectious-contagious or genetic disease. There is also no autoimmune disease.

Symptoms attributed to so-called autoimmune diseases are created by the body to adapt to harmful psycho-emotional factors and / or toxic chemical factors (chemical synthesis substances in industry, agriculture, animal husbandry, poultry and fish, from the food industry, from the pharmaceutical industry, from cleaning and hygiene products, from construction and landscaping materials, etc.) to metals and minerals that become toxic by concentration, as well as to some biological products obtained by degradation or concentration organic matter.

Also, the so-called nosocomial (hospital) infections are the consequence of drug poisoning, not of any microorganisms.

As for the various changes in body tissues that are declared to be “malignant cancers”, they are created by the body itself in order to enhance its various functions, in accordance with the needs imposed by various harmful factors. And when harmful factors no longer act as intensely and for a long time on the being, tissue proliferations become unnecessary, which is why the body breaks them down and eliminates them.

P. S. There are no diseases of unknown cause. The harmful factors that disrupt our energies and damage our tissues, forcing our being to enter the state of self-healing called disease, are known because they are part of our lives:

- negative feelings
- chemical toxins (industrial, agricultural, food, pharmaceutical, etc.)
- some of the concentrated metals and minerals
- some of the concentrated biological products
- artificially generated radiation
- physical and / or intellectual overload
- Insufficient night’s sleep
- quantitative and / or qualitative malnutrition
- weather exposure
- iatrogenic

The extremes of life exhaust our being because it forces us to make adaptive changes in energy, tissue, function and sensory.

Our being adapts by over-stimulating the intensity of vital energy flows in order

to cope with cold, fear, malnutrition, sleep deprivation, physical and intellectual overload. If exposure to the harmful factors listed above is not eliminated or limited, increasing the intensity of vital energy flows above normal unbalances them and depletes them long enough to lead to sudden deaths.

Our being adapts by under-stimulating vital energy flows to cope with heat, sadness, overeating, excessive sleep, sedentary lifestyle.

If exposure to these harmful factors is not eliminated or reduced, decreasing the intensity of vital energy flows below normal will decrease the efficiency of tissue regeneration processes, accelerating tissue degradation, which will further disrupt vital energy flows, accelerating tissue degeneration and this vicious circle will lead to death.

In addition (and unfortunately) there are also concentrated substances in nature (metals, minerals, organics), there are also artificial substances (chemical, pharmaceutical) and there is also energy radiation (artificial) to which our body is forced to adapt either by over-stimulating or under-stimulating vital energy flows, as in the case of the harmful factors listed above.

Therefore, the path to a healthier and longer life lies in a philosophy of life that will lead man to understand the above. More directly: Nothing without God. Our being is a living and reactive structure, made up of substantiated (materialized) energies and unsubstantiated energies that work together to adapt in the most efficient way possible to all existential factors in order to survive as long as possible.

The efficiency of our being's mechanisms to adapt to existential factors is influenced by:

- the physical and energetic characteristics inherited from the parents;
- living conditions;
- working conditions;
- lifestyle;
- the feelings of the soul;
- toxicity;
- iatrogenic;

There are two types of cancer: those that increase tissue function and those that increase the rate of tissue regeneration.

Cancers are nothing but natural processes of automatic self-healing mechanisms in order to survive.

All tissue proliferations are adaptive processes generated by the body to improve tissue functions. Self-healing is also a function of the body's tissues. All manifestations of the body, no matter what they consist of and no matter how dramatic, have as their sole objective survival.

The explanation given by the New German Medicine for the reason why tissue mass losses occur during the acute conflict generated by strong feelings of sadness, is wrong. The idea that in the acute phase of strong feelings of sadness the body generates erosions of the blood vessels, mammary ducts or bile ducts in order to improve blood flow, milk flow or bile flow is completely illogical, because the body permanently makes these things only by dilating or contracting blood vessels or mammary ducts or bile ducts. The reason for the loss of tissue mass during the active conflict created by strong feelings of sadness is related to the imbalance and depletion of vital energy flows in those tissues, which is why tissue regeneration becomes so slow that it can not fully recover degeneration.

1 Thessalonians 5:21

New International Version

21 but test them all; hold on to what is good,

Everyone has to do their own critical research, including on the New German Medicine, which 99, (9)% of its followers idolize as perfect.

Even if the New German Medicine promotes more truths than other schools of understanding the state of health, the state of injury and the state of self-healing, for several reasons which I will not detail, because we would waste time unnecessarily, even the New German Medicine, by its complicated way of being and by its errors, is also a dead end that blocks the progress in understanding that comes when we manage to understand things so as to summarize them until they become simple and clear enough that to be understood by any man.

99.(9)% of the extremely few biologists and doctors who dispute the existence of so-called viruses strongly believe in the existence of atoms and molecules. This shows how far Mankind is from fully awakening from the lies of Scientism presented to the masses as true Science.

Erwin Chargaff, interview 1989

https://media2-production.mightynetworks.com/asset/46622678/Erwin_Chargaff-interview_1989.pdf?_gl=1*m9hsk2*_ga*MTIzMTkzOTQ4OC4xNjI1NzY1OTcw*_ga_T49FMYQ9FZ*MTY2NTM0OTExMi4xMzQ2LjEuMTY2NTM0OTIzMi4wLjAuMA

" Our western culture has cornered itself and we cannot get out .

We are in a 'dead end street' through which we view and try to explain the world. There are thousands of possibilities . The human history is full of wisdom, be it the Indians, Chinese, Persian, greeks. They all lived the way they could , sometimes better , sometimes worst, he thinks 'happier' , a stupid world to use , than we are now.

-We have dedicated ourselves to this positivism , materialism, reductionism and we explain it as the only healing . The science says that only more research can cure what the science has produced ie. all the pollution , pesticides etc.

- He even started thinking that praying for health would be more useful, costs much less and consumes less inner energy.

He does not believe that the sole saving power of natural science as the only answer. The western world is making a huge mistake by forcing it."

" Can it be turned around?

No, he does not think so .

As to turn around these circular paradigms as Kuhn writes, the scientific philosopher , it happens every few hundred years.

It may be conceivable , he can imagine in a society that stops being interested in what we class today as natural sciences."
